DETAILED ACTION

Allowable Subject Matter

1. Claims 13-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The limitations of independent claim 13 do not appear to be found in the Prior Art of Record.

The Prior Art of Record does not teach nor suggest in the claimed combination:

A FIFO memory with single port memory modules for allowing simultaneous read and write operations, comprising: a first single port memory module for an even address of an operation; a second single port memory module for an odd address of said operation, wherein said even address and said odd address alternate;

a memory control module for controlling distribution of reading and writing requests between said even address and said odd address and performance of postponed writing; and

a data output selection module for selecting a value between a first output value from said first single port memory module and a second output value from said second single port memory module and holding said value until a next read request comes; in combination with

a read and write request update module, communicatively coupled to said memory control module and said data output selection module, for updating RE (read enable) and WE (write enable) input flags to avoid reading from empty said first single port memory module and said second single port memory module and writing into full said first single port memory module and said second single port memory module;

and an address and status update module, communicatively coupled to said read and write request update module, said memory control module and said data output selection module, for updating values of address registers R_ADR (read address) and W_ADR (write address) used for access to said first single port memory module and said second single port memory module.

The Prior Art of record does not teach the FIFO memory of the invention in combination with a separate read and write request module, coupled to the memory control module and the data output selection module, dedicated to the updating of read enable and write enable signals; as well as a separate address and status update module, coupled to the read and write request module, dedicated to the updating of both read and write addresses used for accessing the first and second single port memory modules of the FIFO memory.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Midys Rojas whose telephone number is (571) 272-4207. The examiner can normally be reached on M-F 5:30am - 4:00pm.
